[4 reasons why we need more digital voice modes \(not fewer\)](#)

Working for a ham radio dealer, I get to hear a lot of perspectives on a lot of topics. By far, one of the strangest concerns I have heard voiced is that the major radio manufacturers can't agree on a standard protocol for digital voice.

[Radioshack's struggles continue](#)

Back in the day, RadioShack employees would answer the phone by saying, "You've got questions, we've got answers." But RadioShack now seems stumped, and the "B" word is looming ever larger.

How to

Mounting ideas for VHF/UHF antennas

Getting your antenna in the air can sometimes be challenging. Not all of us have unlimited real estate and 120 foot towers at our disposal to hang any radiator on that we please. We all have to work within the confines of our situation, meaning limited space, property restrictions, access, or even budget.

80m antenna options for a small size lot

Perhaps the biggest thing my station is missing is an 80m antenna. I really don't have room for a full, half-wavelength dipole, so I'm looking for options.

Example of bad audio on JT65A

Please do not over-drive your transmitter by setting your sound card output level too high. Also, check for RF getting back into your audio. Bad audio causes transmitted signal spurs and interference on the transmitted signal.
